Professional Summary

- Having 3.1 years of professional experience as a **JAVA Full Stack Developer** at **Technoparin Soft Pvt. Ltd.**
- Strong experience in **Java, Core Java, servlets, JDBC, J2EE, Web Services, Spring Framework, Spring Boot, Hibernate, Spring Data JPA, Kafka, JavaScript, HTML, CSS, MySQL, Microservices, React JS,**
- Hands on experience with relational databases like **MySQL** with **Flyway**.
- Implemented inter-service communication using **RestTemplate, FeignClient**, and reactive **WebClient**.
- Integrated distributed tracing and monitoring with **Spring Cloud Sleuth** and **Zipkin**, enabling visibility into service interactions and latency tracking across microservices.
- Proficient in version control with **Git**, and collaborative workflows on **GitHub**.
- Familiar with **Agile methodologies (Scrum)** and experienced in fast-paced team environments with regular sprint cycles and collaborative development practices.
- Committed to writing clean, maintainable, and testable code, following **SOLID principles** and leveraging tools like **JUnit, Mockito, Postman**, and **Swagger/OpenAPI** for testing and documentation.

Technical Skills

- **Programming Languages:** Core Java, Java 8, Java 17
- **Frameworks/Libraries:** Spring Boot, Spring Data JPA, Spring REST API, Collections Framework
- **UI Technologies:** HTML, CSS, Bootstrap, JavaScript, React.js
- **Database:** MySQL
- **Testing Tools:** JUnit, Mockito, Jacoco, Swagger, Postman
- **Project Management Tool:** Jira
- **Cloud Technologies:** AWS
- **Other Skills:** RESTful APIs, Microservices, Resilience4j, Docker

Experience

Technoparin Software Pvt Ltd

Oct 2022 – Present

Software Engineer

- Developed Bright-Healthcare Insurance system using Java, Spring Boot, Microservices.
- Designed and implemented RESTful APIs for insurance data processing.
- Built microservices for transactions and general operations.
- Utilized MySQL for transactional data storage and retrieval.

Projects

Project : Integrated Eligibility System

Domain: healthcare-insurance

- **Tech stack:** Java 8, Spring Boot with microservices, Spring MVC, J2EE, MySQL, React.js, Apache Tomcat, REST APIs, Maven, JUnit, Mockito, Swagger, AWS
- **Description:** Developed a web-based insurance eligibility and enrollment platform, designed to simplify access to health insurance plans. The platform evaluates user eligibility based on key criteria such as age, income, family size, and location, aligning with federal and state healthcare regulations.

Project Roles and Responsibilities

- Developed scalable, modular, and maintainable web applications using Java (Java 8) and Spring Boot.
- Designed and implemented RESTful APIs for critical modules like Policy Management, User Enrollment, Eligibility Evaluation, and Claims Processing, enabling seamless data exchange between microservices and frontend clients.
- Developed robust CRUD operations with comprehensive exception handling, input validation, and custom error responses to ensure smooth and reliable business workflow execution.
- Optimized database design by normalizing MySQL data models, creating indexes for high-frequency queries, and implementing efficient joins, which significantly improved application performance and data integrity.
- Built dynamic and responsive front-end interfaces using HTML5, CSS3, JavaScript, and React.js, improving user experience and ensuring cross-browser compatibility.
- Implemented Spring Boot Microservices Architecture to decouple core services, enhance scalability, and simplify continuous integration and deployment (CI/CD) processes.
- Integrated inter-service communication using REST APIs and configured Eureka Server for service discovery and Spring Cloud Config for centralized configuration management.
- Developed and executed Unit and Integration Tests using JUnit and Mockito, achieving 85%+ code coverage, ensuring early defect detection, and maintaining code reliability throughout SDLC.
- Performed API testing using Postman, and Swagger validating all API endpoints and workflows.
- Deployed Spring Boot applications to Apache Tomcat servers and AWS EC2 instances, automating deployment pipelines for faster delivery and minimal downtime.
- Implemented Git-based version control for effective branching, merging, and conflict resolution.
- Participated in Agile ceremonies such as daily stand-ups, sprint planning.
